

REGIONAL NSW STEM ROADSHOW FOR K-6 TEACHERS

PROVIDED IN PARTNERSHIP WITH THE NSW DEPARTMENT OF EDUCATION, EDUCATION SERVICES AUSTRALIA & THE DIGITAL TECHNOLOGIES HUB

Curious about how technology can improve your students' experience in the classroom? Get hands-on with emerging tech & Makerspace activities in these one day workshops!

What's a Makerspace? It's no surprise that STEM skills are the future. Makerspaces are a fun and engaging way to foster STEM skills and make them accessible to a broad range of children. There are some wonderful ways that teachers can transform their classroom into a Makerspace or collaborate with other schools to create a joint Makerspace.

Join Coder Academy's specialist trainers in November as we host a series of 1-day NESA approved workshops for teachers to have a play with the latest Makerspace equipment. Get hands-on with everything from robotics and circuits to Virtual Reality, and learn how to link the technology to pedagogy and lesson plans.
