Record keeping

Having reptiles in the classroom allows a number of different opportunities for you and your students. Not only is there the welfare side where you're going to be measuring and checking their feeding records and growth. So, you've got the Mathematics side of it but you've also got the Science side. You've got different things such as measure

(Student: Twenty five and a half centimetres.)

Interpreting data and teamwork. And individual work as well.

Part of routinely keeping animals in school involves record keeping. For me that means maintaining their feeding records but also such things like behaviour or any cleaning and condition, things that I notice. It's really advantageous in schools as well because you can get the students engaged in that. They can help you to also clean the tanks but also with these record keepings. Also in school if you have more than one teacher looking after the reptiles that helps with maintaining records as well.
